Lead Database Developer / Data Engineer

Job Title: Lead Database Developer / Lead Data Engineer
Reports to: Founder aka Band Manager
Salary: £26,000
Hours per week: 35
Location: Middlewich CW10 and working Remotely

The Important Stuff

We're looking for a Lead Data Engineer with a wide taste in music to join our Band.

You might be thinking what's with the Band reference and music? Well, our founding band member of Arctec, Tom, is a BIG lover of music, and he's the reason why all team members also have a band role in their job title!

So you can expect to be working with our other Band members to develop databases and integrate software for our eclectic, worldwide customer base. From developing databases for Budgies and Bars to Councils and Furniture; no two days are the same!

And, if you really want to reach for stars, there's an opportunity to manage your own mini-Band of Engineers.

One more important thing; David Attenborough is our hero, and we really care about our planet. So, ideally, you're already taking an interest in trying to live and work more sustainably, because we want our Band to care too (and maybe chat about the latest Attenborough programme on TV).

Investing In Our Band

- Just as we like to look after our planet, we look after our Band too. And, we've chosen Perkbox to help us do just that. Perkbox is a global employee benefits & rewards system. You'll have access to;
    o Discounts at the biggest brands, all year round.
    o Supermarket savings, discounted days out or on a daily coffee or a summer holiday, there's something to suit everyone's lifestyle.
    o Digital content to help support wellbeing; with carefully curated wellbeing content that caters for all needs such as: workout videos, meditation guides, soothing sleep stories and more! Available anywhere, any time on desktop, tablet, smartphone or smartwatch
- Everyone gets a birthday Perkbox.
- **AND** everyone gets their birthday off as an extra day holiday each year!
- You'll have 20 days holiday including Bank Holidays.

Good To Know

- During the training period, you'll be on site (postcode CW10), and then eventually work remotely some days.
- Onsite parking is available and there are nearby bus routes.
- There is a 6 month probation period (or as we like to call an audition period)

What You'll Be Doing

- Developing databases for Customers in the Ninox platform.
- Connecting software for Customers using the Integromat/Make platform.
- Communicating with Customers to provide updates on the work you complete.
- Eventually manage and support a mini-Band of Data Engineers.
- Documenting all development work completed in our dedicated ERP for others to read and easily understand.
- Completing your work in the set timescales.
- Generally being a decent Band member, sharing the brew making and your favourite music.

Audition Requirements

- Clear knowledge of database development, including the importance of table relations, basic functions and the importance of the user interface.
- Experience of building in Ninox is desired, but training will be provided.
- An understanding of application programme interfaces (API) and how these can be used to connect software together. Experience with Integromat/Make is desired but training will be provided.
- Be familiar with Mac OS and Microsoft Office 365.
- Great communication with Customers via all mediums including telephone, email and video. Our Customers are based all over the world.
- Be able to provide excellent Customer Service.
- Have great Time Management skills and Organisation in order to work towards deadlines and deliver projects in set time periods.
- Demonstrate good initiative and be able to work as part of a team and also on your own.
- Be able to manage and motivate a team of people to deliver solutions for Customers on time to the desired standard.
- Continuously demonstrate excellent attention to detail in all aspects of your work.
- Experience in developing websites or working with Shopify would be beneficial but not essential
- A wide Music taste; as we love music!
